GoTrustWDU Token (TUR)

Official Whitepaper

Contract Address:

0x03Ad4Efb79B8E8e47b50E48849EaB9dDdB6E5ecA

Network: BNB Smart Chain

Standard: BEP-20

Status: Source code verified on BscScan

Website: https://trustwdu.com

Contact: tru@trustwdu.com

1. Executive Summary

GoTrustWDU Token (TUR) is a fixed-supply BEP-20 utility token deployed on the BNB Smart Chain.

The project is designed with a strong focus on transparency, simplicity, and predictable on-chain behavior.

The smart contract is fully verified and intentionally minimal. It contains no minting, burning, taxation, or hidden control mechanisms. All token behavior can be independently audited and verified on-chain.

GoTrustWDU is a utility-oriented blockchain project and is not presented as an investment product.

2. Token Specification

Token Name: GoTrustWDU Token

Symbol: TUR

Decimals: 18

Total Supply: 9,000,000,000,000 TUR

Standard: BEP-20 (ERC-20 compatible)

Network: BNB Smart Chain

Contract Design

Full token supply minted at deployment

No mint function

No burn function

No transaction tax or fee

No blacklist or pause functionality

No hidden owner privileges

The contract logic is clean, transparent, and publicly verifiable.

3. Project Purpose & Utility

GoTrustWDU Token is intended for basic Web3 utility use cases, including but not limited to:

Community reward and participation systems

Educational blockchain demonstrations

Experimental and lightweight decentralized applications

Transparent on-chain interactions

The project does not promote speculative or financial return mechanisms.

4. Tokenomics

Total Supply

100% of the total supply equals 9,000,000,000,000 TUR.

Distribution Principles

No private sale

No public sale

No seed or venture allocations

All tokens were minted at deployment and are distributed gradually based on project needs and transparent on-chain activity.

There are no hidden allocations or undisclosed token releases.

5. Governance & Maintenance

Founder & Project Maintainer:

Toorandokht Afshari

GoTrustWDU is an independently maintained blockchain project.

The founder is responsible for smart contract deployment, documentation, and maintaining transparency across all public resources.

The project does not operate as a registered company or investment entity.

6. Security & Transparency

Smart contract source code verified on BscScan

Open-source repository published on GitHub

No backdoors or privileged control functions

Community review and independent verification encouraged

Repository:

https://github.com/gotrustwdu/tru

Users interact with the smart contract at their own responsibility.
